MOHD ZAHID MOHAMMAD HAMID KAMIL

Mobile Application Developer | Flutter & Native Android (Kotlin)

Mumbai, Maharashtra, India | +91 9757176357 | zahidkamil505@gmail.com
github.com/TheLegendZK | linkedin.com/in/thelegendz | Portfolio

PROFESSIONAL SUMMARY

Mobile Application Developer with a B.Sc. in Information Technology (8.58 CGPI) and hands-on experience building cross-platform (**Flutter / Dart**) and native Android (**Kotlin / Jetpack Compose**) applications. Skilled in feature-first clean architectures, reactive state management with **Riverpod**, offline-first local caching, real-time **Firebase** backends with Role-Based Access Control (RBAC), and automated unit and widget testing.

TECHNICAL SKILLS

Languages	Dart, Kotlin, Java, SQL, JavaScript (Firestore Security Rules)
Frameworks & UI	Flutter, Jetpack Compose, Material 3, Adaptive & Responsive Layouts (`LayoutBuilder`, `MediaQuery`), Shimmer Skeletons
State & Architecture	Riverpod (`StateNotifier`, `StreamProvider`, `FutureProvider`, Derived Providers), MVVM, Feature-First Clean Architecture (Data, Domain, Presentation), Dagger Hilt (DI)
Backend & Storage	Firebase Authentication (Phone OTP), Cloud Firestore (Real-Time Streams, Atomic `WriteBatch`, Security Rules), REST APIs (`http`), Local Persistence (`SharedPreferences`, Room Database)
Testing & Tooling	`flutter_test` (Unit & Widget Testing), Git & GitHub, Android Studio, VS Code, Postman, Firebase CLI

TECHNICAL PROJECTS

SplitPay — Real-Time Group Expense & Debt Simplification App | Flutter, Dart, Riverpod, Firebase

- Architected a **Feature-First Clean Architecture** (`auth`, `groups`, `group_detail`, `settlements`) using **Riverpod** reactive streams and controllers to manage real-time group expenses and member invitations.
- Engineered a **Greedy Debt-Simplification Algorithm** (`SettlementCalculator`) that computes net balances and minimizes total peer-to-peer transactions, supporting weighted headcount shares (1x solo vs. 2x couple splits).
- Implemented atomic Firestore `WriteBatch` operations for group creation, invitation lifecycle management, and cascading deletes, backed by custom **Firestore Security Rules** enforcing authenticated Role-Based Access Control.
- Built a reusable widget system (`SplitPayCard`, `AsyncElevatedButton`, `SplitPayModalSheet`) featuring creator-verified swipe-to-delete (`Dismissible`) with instant `SnackBar` undo restoration and unit tests verifying settlement math.

Tech Articles (Fetch & Display) — DEV.to News Explorer | Flutter, Dart, Riverpod, REST API

- Developed a cross-platform developer news client consuming the **DEV.to REST API** with tag-based filtering, infinite-scroll pagination (`ScrollController`), and derived **Riverpod** providers for real-time search filtering.
- Designed an **offline-first caching layer** using `SharedPreferences` and JSON serialization to persist bookmarked articles and cache the home feed for seamless offline reading with automatic retry banners.
- Built an **Adaptive Layout** (`LayoutBuilder` and `MediaQuery.textScalerOf`) that dynamically transitions between a single-column mobile `ListView` and a multi-column tablet/desktop `GridView` without render overflows.
- Wrote automated **Unit and Widget Tests** (`flutter_test`) validating null-safe JSON deserialization and reactive bookmark state toggling.

SocioNet - Residential Society Management System | Kotlin, Jetpack Compose, Firebase, Room DB, Hilt

- Built a native Android application using **Jetpack Compose** and **MVVM Clean Architecture** featuring role-based dashboards, visitor tracking, staff registries, and complaint management modules.
- Integrated **Room Database DAOs** with **Cloud Firestore** to provide offline data caching and injected dependencies across layers using **Dagger Hilt**.

EDUCATION

Bachelor of Science in Information Technology (B.Sc. IT)

CGPI: 8.58 / 10 | Graduated: 2026

University of Mumbai — Mumbai, Maharashtra, India

Relevant Coursework: Mobile Application Development, Data Structures & Algorithms, DBMS, Software Engineering
